Welcome Investors to our first ever EXUS publication

EXUS was created to become a proof of stake crypto currency with the focus on security and anonymity. We want to ensure, that while we are creating our vision, we are also being innovative in our approach.

EXUS has partnered with a small fund that specializes in cryptocurrencies. In exchange for a few nodes, the fund agreed to back EXUS in several ways. The focus of the fund is to support EXUS in the open market. This process will generate a continuous buying on the exchanges. Currently, the fund started to support the coin on crypto-bridge.

Due to the nature and anonymity of EXUS coin, the fund will also remain anonymous until such a time becomes irrelevant.

The fund has also added several members to the team. One of which is Richie, who is the community manager and will act as the liaison to the fund. A second member is a veteran trader & analyst that will continually assess EXUS position in the market while supporting the coin.

In short, we came up with an innovative idea to support our coin, along with the expansion of the team, this will allow faster development of EXUS. We are currently reassessing the targets in our roadmap. Our future monthly publications will also include progress from the development team.

We are happy to report that 200 EXUS nodes are now established which equate to 50% of total EXUS coins in circulation. Thank you for your continued support!
